### AREA AND OUTDOOR LED LIGHTING

The Cireon family of area and outdoor lighting is the industry's longest lasting high performance solid state luminaires. With the best in thermal management, proprietary optics, and the highest quality componentry available, Cireon products provide beautifully uniform lighting while maintaining unmatched output over the industry's longest lifetimes. Cireon offers the industry's only combination of the superior thermal conductivity of an aluminum extrusion heat sink with a bird-protected ventilated housing and dual-sided copper clad boards with thermally inductive interfaces that optimize thermal conductivity. The low inlet, high outlet plenum design appropriately protects the heat sink while shielding from debris.

This technology is only part of our dramatic difference. Cireon has also engineered proprietary optic distributions to support all traditional roadway and parking lot layouts. Multiple color temperatures are available to suit your aesthetic tastes and, with three power levels replacing 150w to 400W traditional HIDs, eliminating the routine expense of the bucket truck will put savings straight to your bottom line. The multitude of pole and wall mounting options we offer means that there's a Cireon product to suit virtually all your area and outdoor LED lighting needs.

Whether it's parking garage lighting, parking lot lighting, or outdoor LED lighting that you need, the Cireon design provides the longest life with our trademark coverage and uniformity. 100% of Cireon's proprietary componentry is manufactured by US suppliers in US facilities. All final assembly is done in the US.
